

Yizheng Xie

yizheng_xie@brown.edu | 857-498-3205 | yizhengx.github.io | Providence, RI

Education

Ph.D. in Computer Science , Distributed Systems, Operating Systems, Cloud Computing Brown University , Providence, RI, USA (Advisor: Nikos Vasilakis)	Sept 2023 – Present
M.S. in Computer Science , Database Systems, Streaming Systems Boston University , Boston, MA, USA (Advisors: Vasiliki Kalavri, John Liagouris)	Sept 2021 – May 2023
B.E. in Electronic Information Engineering , Computer Systems, Machine Learning Chinese University of Hong Kong, Shenzhen , Shenzhen, Guangdong, China	Sept 2017 – May 2021

Working Experience

Google , Sunnyvale, CA <i>Software Engineer Intern in Machine Learning Cluster Runtime, AI Engines Team</i>	May 2026 – Aug 2026
- Improved MLCR's reliability and integration with Pathways for in-memory suspend and resume of TPU workloads. - Designed and built a TPU efficiency simulator that models context switching across TPU workloads to analyze and quantify TPU efficiency improvements and progress efficiency trade-offs.	
Meta Platforms , Menlo Park, CA <i>Production Engineer Intern in Kernel Team</i>	May 2022 – Aug 2022
- Improved and integrated Fedora and CentOS Stream forges, issue trackers, and build workflow into Meta internal tools. - Implemented a CLI tool to automate the recursive updating of Rust RPM packages, optimizing parallel chain-build order and ensuring full compatibility (Pagure Repository: pagure.io/fedora-rust/rust-update-set).

Research

Slowpoke: End-to-end Throughput Optimization Modeling for Microservices <i>Published at NSDI'26, Microservice, Tracing, Kubernetes, Service Mesh, Docker, Golang, C++</i>	Sept 2023 – Apr 2025
- Proposed a novel linear programming-based performance model to quantify end-to-end throughput improvements of hypothetical microservice optimizations without requiring white-box knowledge. - Developed the first system to accurately predict throughput in complex microservices, achieving RMSE of 2.1% across several real-world benchmarks and 1.9% across 108 synthetic benchmarks with diverse characteristics.	
Fractal: Fault-Tolerant Shell-Script Distribution <i>Published at NSDI'26, Fault-Tolerance, Hadoop Distributed File System, Shell, Golang, C</i>	Sept 2023 – Dec 2024
- Developed a system for fault-tolerant distribution of unmodified shell scripts, delivering average speedups of 9.6× over Bash, 5.5× over Hadoop Streaming (AHS), and 1.2× over DiSH, the state-of-the-art shell scaleout system. - Designed a lightweight fault-recovery mechanism—including remote-pipe instrumentation and dynamic result persistence—that achieves recovery within 1.26× of fault-free execution and delivers a 9.3× speedup over AHS.	
Incr: Faster Incremental Execution, Opaquely <i>Published at OSDI'26, Incremental Computation, Memoization, Syscall Tracing, Unix Shell, Rust, C, Python</i>	Aug 2025 – Jan 2026

- Developed a runtime system that automatically memoizes transient results and traces system calls to capture fine-grained and side-effectful dependencies, enabling orders-of-magnitude faster incremental development while providing correctness guarantees.

leash: Scaling Out Shell Scripts with Resumable Cloud Computing

Sept 2023 – Present

In preparation (NSDI'27), with Nikos Pagonas, Haoran Zhang and Konstantinos Kallas

- Developed a system to scale out unmodified shell scripts using cloud (serverful and serverless) computing, achieving $12.7\times$ average and $154.2\times$ peak speedups over Bash; in some cases both faster and cheaper, *e.g.*, achieving a $6.5\times$ speedup while reducing cost by 16.4% compared to PASH—the state-of-the-art shell parallelization system.
- Designed a *suspend-and-resume* protocol that extends AWS Lambda beyond the 15-minute execution limit while preserving correctness and Unix-style streaming efficiency, with negligible slowdown (avg: 3%).

MeshBench: Benchmarking and Analyzing Service Meshes for Microservices

Aug 2025 – Present

Under Submission (NINEs'27), with Alice Song, Deepti Raghavan and Akshay Narayan

- Developing a comprehensive benchmarking suite to evaluate the performance overhead and trade-offs of leading service meshes—*e.g.*, Istio, Cilium, Ambient, Canal—in microservice environments, and analyzing how service mesh architectures and functionalities, *e.g.*, security and observability, affect performance and resource utilization.

Invited Talk

Towards Automated Performance Optimizations for Service-Oriented Architectures

Oct 2025

Boston University, Boston, MA, USA

Teaching

CSCI 1380 Distributed Systems, Brown University, *Teaching Assistant (Spring 2023, Spring 2024)*

- Co-designed and implemented hands-on assignments for building a large-scale search engine that emphasized core distributed systems concepts, including a distributed key-value store for scalable data storage, data sharding for load balancing, consensus protocols for data consistency, and a MapReduce system for efficient data processing.

CSCI 2952R Systems Transforming Systems Seminar, Brown University, *Teaching Assistant (Fall 2024)*

- Mentored students in conducting state-of-the-art systems research across operating systems, distributed systems, and cloud computing, guiding them through system implementation, experimental evaluation, and academic paper writing.

Skills

- **Programming Languages:** Go, Python, C/C++, Rust, Java, JavaScript, Shell, SQL
- **System and tools:** Kubernetes, Docker, Istio, AWS (*e.g.*, Lambda), Jax, eBPF, Linux/Unix, Apache Flink, Spark, Kafka, V8/libUV, MongoDB, Redis, Git, CI/CD (GitHub Actions, GitLab CI), Helm, Make, CMake, LaTeX, Vim, perf

Languages and Interests

- **Languages:** Mandarin (native), English (fluent)
- **Interests:** Photography, Video Editing, Badminton, Basketball, Traveling, East Asian History
